

ARAVIND A

Aspiring Software / Frontend / Full Stack Developer

+91 9345990731 | aravindarumugam46@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Electronics and Communication Engineering student (graduating 2027) with hands-on experience building web applications, embedded IoT systems, and desktop tools using Python, Java, C, and JavaScript. Skilled in translating ideas into working software through personal projects spanning frontend development, microcontroller programming, and algorithmic problem-solving (Minimax AI). Quick learner with strong logical thinking and a growing foundation in software development, eager to contribute to a product- or service-based engineering team as a Software/Frontend/Full Stack Developer.

EDUCATION

Bachelor of Engineering — Electronics & Communication Engineering

Dr. Mahalingam College of Engineering and Technology, Pollachi | Expected 2027 | CGPA: 7.7/10

HSC — Amalorpavam Matriculation Higher Secondary School, Pondicherry | 2023 | 74%

TECHNICAL SKILLS

Programming Languages: Python, Java, C

Frontend / Web Technologies: HTML5, CSS3, JavaScript

Embedded Systems & IoT: ESP32, Arduino, Sensor Interfacing

Tools & Platforms: Git & GitHub, Multisim, Xilinx Vivado, Cisco Packet Tracer, VS Code

Core Concepts: Object-Oriented Programming, Algorithms (Minimax), Client-Server Communication, UI/UX Basics

PROJECTS

Mini Game Hub | *HTML, CSS, JavaScript*

- Engineered a multi-game web application featuring Tic-Tac-Toe, Rock Paper Scissors, and Memory Flip, applying client-side scripting for real-time interactivity.
- Implemented the Minimax algorithm to power an unbeatable AI opponent, strengthening core algorithmic and logic-building skills.

Accessibility Checklist App | *Python, Tkinter*

- Developed a desktop application with Python and Tkinter to evaluate website/product accessibility compliance through an interactive, checklist-driven interface.
- Designed a reusable UI structure to simplify accessibility audits, improving evaluation speed and consistency.

Wi-Fi Controlled RC Car | *ESP32, HTML/CSS, IoT*

- Built an IoT-based RC car using ESP32 as both the embedded motor controller and web server, enabling real-time control over a local Wi-Fi network.
- Designed a mobile-friendly HTML/CSS interface for intuitive browser-based control, bridging embedded hardware with a web front end.

CERTIFICATIONS

- NPTEL Certification — Sensor Technologies: Physics, Fabrication, and Circuits
- Tata GenAI Powered Data Analytics Job Simulation — Forage
- Artificial Intelligence Foundation Certification — Infosys Springboard

ACHIEVEMENTS

- Selected among the Top 50 Teams at Capgemini Superset Buildathon for innovative problem-solving and technical performance.
- Completed the Johnson & Johnson MedTech Robotics & Controls Job Simulation.
